

No Wires LOCKS

now integrated with Impro's Access Portal

Aperio is an Assa Abloy technology that enables mechanical locks to be wirelessly linked to the Impro Access Portal access control system. The Aperio locks connect wirelessly to a communications hub which in turn connects via IP to the Access Portal software. This allows for a cost effective low energy solution for doors with high security requirements

Aperio System Main Features

- No wires to the door
- Quick and easy installation
- Low energy foot print – requires one battery per lock for 40,000 cycles
- Up to 25m range between Hub and lock
- On Line access control
- Multiple Tag Formats

Seamless Integration into Access Portal

- Aperio communication hubs & locks are installed into Access Portal as system controllers and readers emulating Impro hardware.
- Tagholders are enrolled into Access Portal and granted access to doors as per normal
- Configured communication hubs will report themselves and the locks connected to them automatically and will show in the install view ready to be installed into Access Portal.
- Aperio locks need to be licensed before they will work with Access Portal and is included with any Aperio lock sourced through Impro Technologies
