

# SECURING THE FLOW

HOW DO YOU  
KEEP 7 BILLION  
PEOPLE MOVING  
SECURELY? ✨

A blue-tinted photograph of a busy city street. In the foreground, a person in a white coat walks across a crosswalk. To the right, a crowd of people is walking. In the background, a line of cars and a white truck are visible on the road. The scene is set between tall buildings, with light streaming down the street.

Half of the earth's current population lives in towns and cities. In 2025 the expected number of city-dwellers will be an astonishing 70% of approximately 8 billion people living on our planet. The number of motorized vehicles will have surpassed the billion by then. The rapid urbanization of our global society challenges us to enable our citizens to keep moving around in a secure and convenient fashion. Cities, airports, sea ports and industrial estates all are expected to be smart about mobility.

SECURING  
THE FLOW WITH  
IDENTIFICATION  
SYSTEMS AND  
MOBILITY  
SOLUTIONS ✨

Readers, sensors and controllers that optimize, monitor and control the movement of vehicles and people. Technology that can easily be applied to security, traffic and parking applications. Nedap's identification systems and mobility solutions really contribute to smarter mobility by controlling vehicle access, reduce search traffic related to parking, enable easy access to buildings and parking facilities.

**We proudly present you our four solutions to secure the flow of vehicles and people.**

# YOU KNOW WHO IS DRIVING

| vehicle and driver identification

Decide who gets access and who does not. At a distance of up to ten meters our readers identify both the vehicle and the driver. Our RFID and ANPR solutions have unique and distinctive features. Based on the real-time information from our readers, Nedap facilitates identification of vehicles and drivers for a variety of applications, including vehicle access control, fleet management, taxi dispatch systems and truck logistics. Secure, safe and without causing congestion.

# INSTANT HANDS-FREE DOOR ACCESS ☆

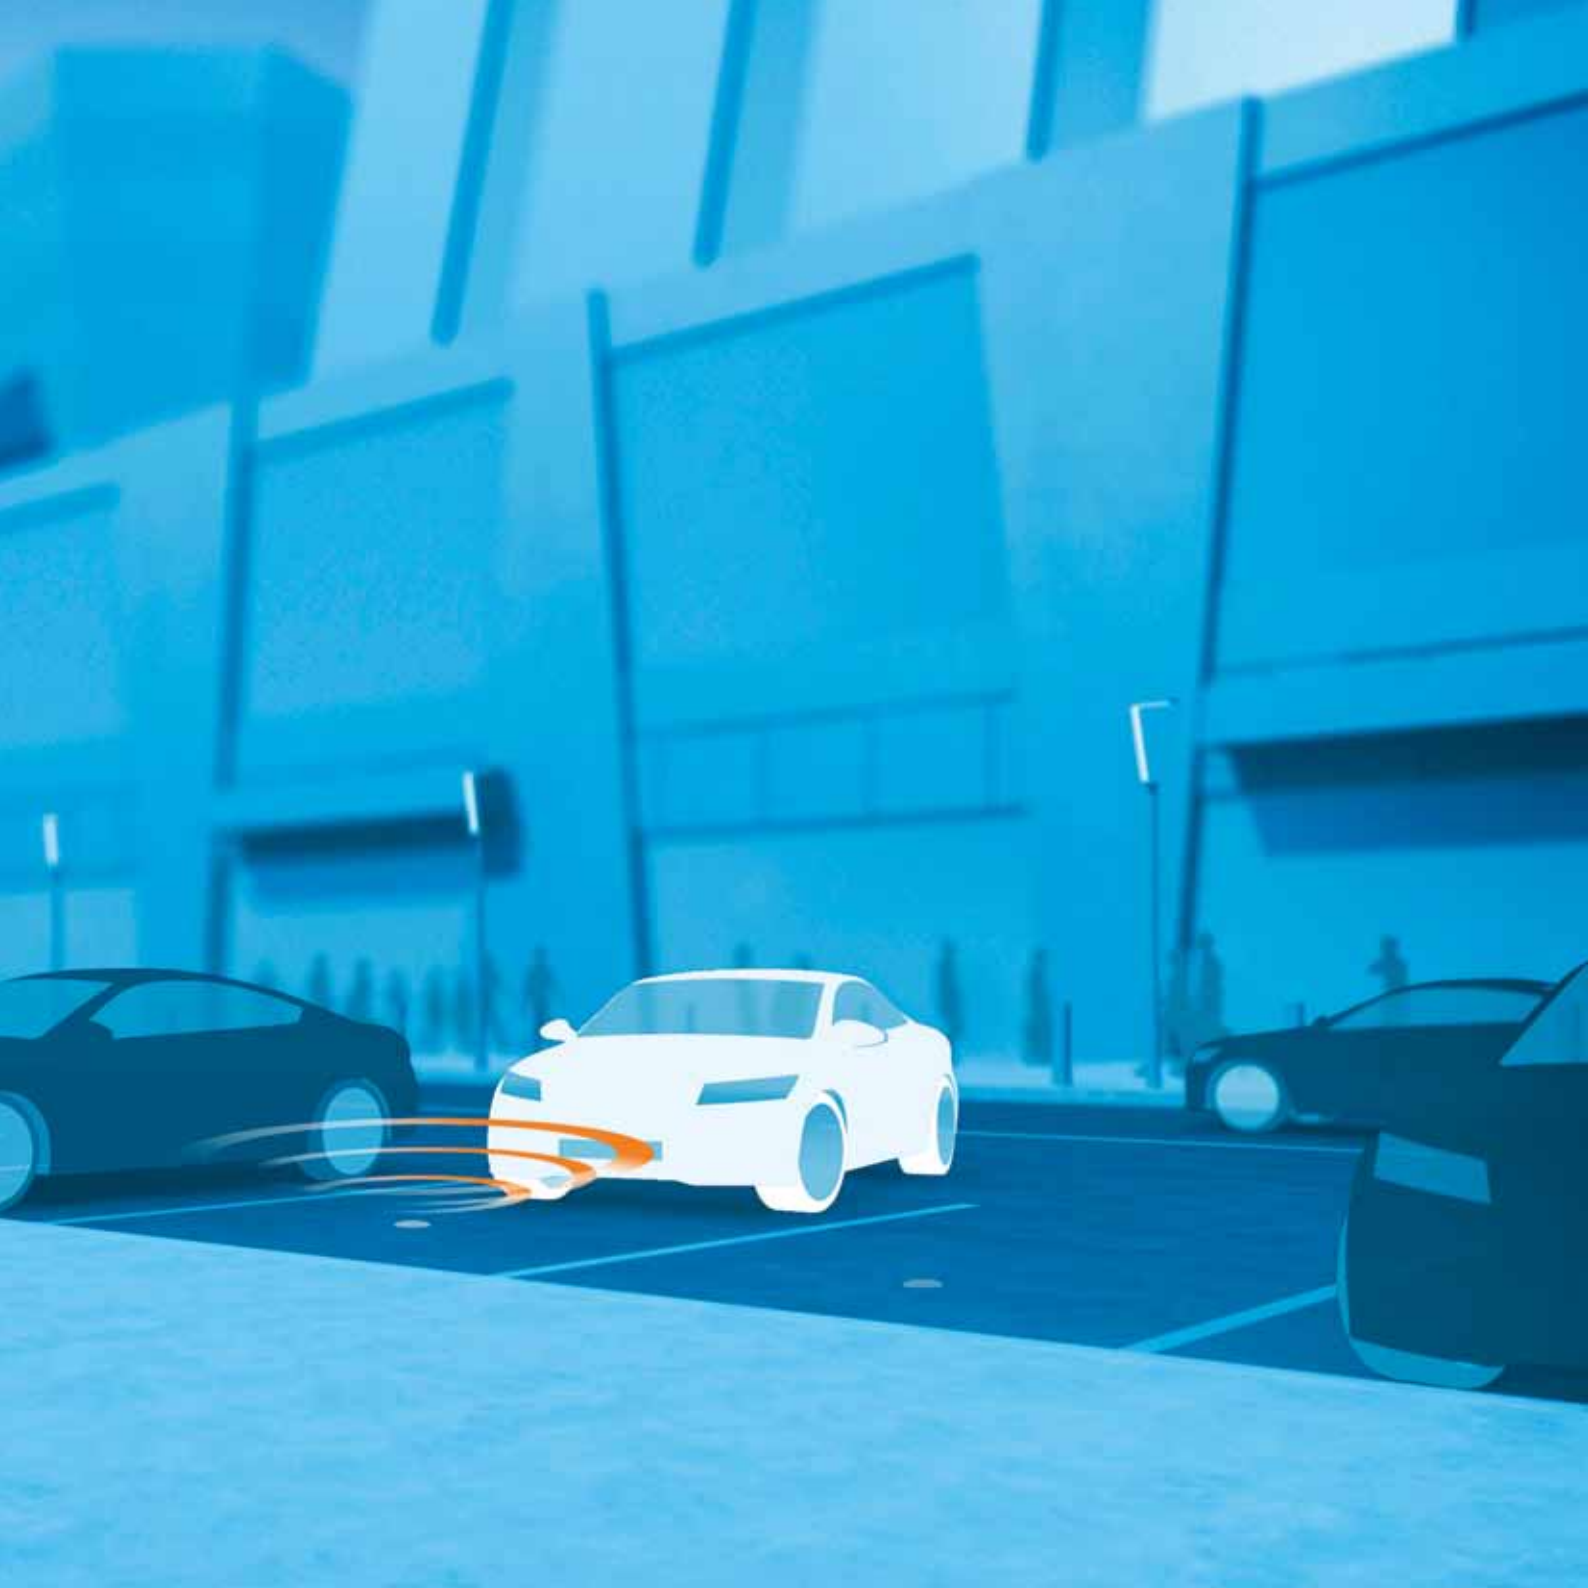

| people identification

Convenient building access control has never been easier achieved. People wearing a tag or card can automatically be identified at a distance of several meters. Without the need to actively present the card to a reader. Our readers can be applied indoor and outdoor for all entrances that require a little more convenience: hospitals, facilities for disabled people, universities, warehouses. Opening the right doors fast and user-friendly was never easier.

# THE SMART WAY TO PARK

| vehicle detection

Make parking easier than ever. Each driver is guided automatically to an available parking bay. Enforcers are directed to vehicles in overstay. Cities benefit from more efficient management of traffic. By information from wireless sensors which detect in real-time whether or not a single parking bay is occupied and how long it has been occupied. It's just parking, made smart.

# YOU ARE IN CONTROL

| city access control

Long range readers. Smart card readers. License plate cameras. Intercoms. Modern access points and gates are equipped with a multitude of access technology. Now you can control all of this technology through a single management controller. This controller offers you remote control so you can manage all vehicle entrances to your parking or urban area. Simply, safely and without delay. Free your city or parking from vehicles that should not be there.

# YOUR TECHNOLOGY PARTNER

| Nedap Identification Systems

## SECURING THE FLOW

Nedap is leading specialist in systems for long range identification, wireless vehicle detection and vehicle entrance management. We offer Identification Systems\* and Mobility Solutions\* that optimize, monitor and control traffic flow of vehicles and people. Safe, secure and efficient. Nedap Identification Systems offers a full range of innovative products that combine leading edge technology with quality resulting from over 30 years of RFID experience.

## MARKET LEADERSHIP OF DUTCH ORIGIN

Nedap Identification Systems is part of Nedap N.V., headquartered in the Netherlands. Nedap designs and develops intelligent, sustainable technological solutions for themes that are relevant to the modern society. It is Nedap's ambition to offer "Technology that Matters".

## WORLDWIDE SALES NETWORK

Nedap Identification Systems has offices in the United States, Italy, Dubai and Singapore. Our skilled business partner network is spread across the globe. We continue to make sure
